DevOps Engineer - AWS, Kubernetes, GitOps, Observability, Cloud Security

PROFILE

DevOps Engineer with 3+ years of hands-on experience designing, securing, scaling, and operating production-grade cloud-native infrastructure. Specialized in AWS, Kubernetes, CI/CD, GitOps, observability, automation, and cloud security. Proven record leading complex platform migrations, improving deployment reliability, strengthening AWS security posture, and optimizing infrastructure for performance, cost, and operational resilience.

CORE DEVOPS VALUE

- **Cloud-native operations:** Production EKS/Kubernetes, AWS services, secure networking, service reliability, and platform optimization.
- **Migration leadership:** Led observability, WAF, scaling, and GitOps migrations from assessment to execution and follow-up.
- **Security and governance:** WAFv2, CloudTrail, AWS Config, Security Hub, endpoint coverage, managed rules, and cost-efficient security analytics.
- **Automation mindset:** CI/CD pipelines, Helm standardization, ArgoCD GitOps, Terraform knowledge, Ansible, and Bash scripting.

PROFESSIONAL EXPERIENCE

DevOps Engineer

EnglishCentral | Turkey - Remote | Jan 2025 - Present

- Led the end-to-end migration from Instana to DataDog for production and sandbox Kubernetes clusters, including cost evaluation, product selection, configuration, support follow-up, and full Jira project planning.
- Migrated AWS WAF Classic to WAFv2, applied modern managed rule groups, evaluated managed node group roles, covered application endpoints, and strengthened the overall security posture.
- Designed and implemented a hybrid autoscaling model using cron-based scaling for predictable traffic patterns and HPA for unexpected load; operated Cluster Autoscaler and later migrated to Karpenter for more efficient Kubernetes worker scaling.
- Monitored worker nodes for security, capacity, and IP availability to ensure Kubernetes workloads could scale safely without exhausting subnet or networking resources.
- Led cloud security monitoring operations for user and infrastructure activity using AWS CloudTrail, AWS Config, and Security Hub.
- Transformed security and activity data into cost-efficient query patterns using Athena, curated datasets, and QuickSight dashboards for monitoring and operational visibility.
- Converted production, sandbox, and development services into Helm-based deployments and integrated them with ArgoCD to establish GitOps practices across environments.
- Managed AWS EKS clusters, CloudFront, Aurora, ElastiCache, Jenkins pipelines, monitoring systems, and cloud infrastructure with focus on availability, performance, reliability, and cost optimization.

DevOps Engineer

ProResources | Damascus, Syria | May 2024 - Oct 2025

- Containerized a legacy Security Information and Event Management solution using Docker, improving scalability, deployment consistency, and operational maintainability.
- Collaborated with cloud engineering teams to prepare cloud environments for containerized security monitoring workloads and production-ready deployments.
- Orchestrated security monitoring solutions with Docker Swarm and Kubernetes, improving reliability, scalability, and service control.
- Built centralized monitoring using Prometheus, Grafana, and Loki to provide visibility into system health, service behavior, logs, and performance trends.
- Integrated Prometheus Alertmanager with Telegram and PagerDuty to streamline alert routing and improve incident response workflows.
- Resolved production tickets and supported clients on-site, troubleshooting system issues and maintaining stable operations.
- Automated routine operational tasks using Ansible and supported team members across infrastructure, monitoring, and deployment projects.

DevOps and System Engineer

Boost Company | Damascus, Syria | Jan 2024 - May 2024

- Built and tested Docker images for microservice-based projects and managed Docker environments for development and integration workflows.
- Designed a Docker Compose cluster for full microservice integration with cAdvisor, Prometheus, and Grafana for infrastructure and service monitoring.
- Created automation scripts to streamline repetitive development and operational tasks, reducing manual effort and improving consistency.
- Installed and configured Nexus Repository for artifact and Docker image storage, enabling controlled versioning and efficient image retrieval.
- Implemented backup strategies for systems and artifacts, improving recovery readiness and operational continuity.
- Managed pfSense and Sophos firewall solutions, maintained Windows domain controller services, and troubleshoot Linux server architecture issues.

Telecom System Administrator Engineer

MTN Syria | Damascus, Syria | Oct 2022 - Dec 2023

- Administered telecom systems running on Red Hat Linux, Solaris, and CentOS in a 24/7 production environment.
- Performed daily hardware checks using iBMC, iLO, and iDRAC management interfaces and monitored service, license, and database health.
- Handled service management, fault management, account management, performance management, and privilege management operations.
- Resolved system faults by reviewing logs, support documentation, and operational runbooks, while maintaining service stability.
- Developed scripts for housekeeping, backup, routine task automation, and data editing across operational systems.

TECHNICAL SKILLS

Cloud and AWS	AWS EKS, EC2, Aurora, ElastiCache, CloudFront, WAF/WAFv2, CloudTrail, AWS Config, Security Hub, Athena, QuickSight, IAM best practices
Containers and Kubernetes	Docker, Kubernetes, EKS, Helm, Karpenter, Cluster Autoscaler, HPA, Docker Swarm, Docker Compose
CI/CD and GitOps	Jenkins, ArgoCD, GitOps workflows, Helm-based release management
Infrastructure as Code	Terraform, Ansible, Bash scripting, automation workflows
Monitoring and Observability	DataDog, Prometheus, Grafana, Loki, ELK Stack, Instana, cAdvisor, Alertmanager, PagerDuty
Security and Networking	AWS WAFv2, DDoS mitigation, endpoint protection, pfSense, Sophos XG, cloud security monitoring, audit logging
Systems and Virtualization	Linux administration, Red Hat, CentOS, Solaris, VMware ESXi, VirtualBox, storage management

SELECTED PROJECTS AND ACHIEVEMENTS

- **Observability modernization:** Led full migration from Instana to DataDog, covering commercial evaluation, configuration, support coordination, and production rollout.
- **GitOps transformation:** Standardized services across prod, sandbox, and dev with Helm and ArgoCD to improve deployment traceability, consistency, and rollback control.
- **Kubernetes scaling modernization:** Implemented scheduled and reactive scaling, then migrated worker scaling to Karpenter for improved elasticity and capacity management.
- **AWS security analytics:** Built a cost-aware activity monitoring flow using CloudTrail, AWS Config, Security Hub, Athena curated datasets, and QuickSight dashboards.
- **Security platform containerization:** Containerized SIEM workloads and supported their orchestration with Docker, Docker Swarm, and Kubernetes.

EDUCATION

Bachelor's Degree in Electronics and Telecommunication Engineering

Damascus University | 2017 - 2023

PROFESSIONAL STRENGTHS

- Production-grade Kubernetes and AWS infrastructure operations.
- DevOps transformation, platform migration, and GitOps adoption.
- Cloud security hardening, governance monitoring, and operational visibility.
- Incident response, automation, monitoring, and reliability engineering.
